

Smoke Test — Did the Database Cleanup Work?

GateGuard Nexus · CRM consolidation check

Who: anyone (an intern is perfect) · **How long:** ~10 minutes

Why: we changed where the app saves leads, opportunities, and activity notes. This test makes sure nothing broke and the data lands in the right place.

Before you start:

- Open the Nexus app and **log in** (use a staff/admin login, not a dealer one).
- Keep this sheet next to you. Check a box for each step. ✓ = **good**. ✗ = **stop & tell Russel**.
- If a red error message pops up on screen, that's a ✗ — write down what it said.

Test 1 — Make a lead with the Nexus helper

The "Nexus helper" is the little chat assistant (the glowing button, usually in a bottom corner).

1. ☐ Click the **Nexus assistant** button to open the chat.
2. ☐ Type this and send it:

Create a lead named Smoke Test Property, company Test HOA, email test@example.com

3. ☐ The assistant should say the lead was **created** (if a little confirm card appears, click **Execute**).
4. ☐ Go to the **Leads** list (CRM → Leads).
5. ☐ Find **"Smoke Test Property" in the list**. It should be there.

✓ **Pass:** the new lead shows in the Leads list with the name and company you typed.

✗ **Fail:** the assistant said it worked but the lead is **not** in the list (that's the exact bug we fixed — flag it).

Test 2 — Add a note to a lead

1. ☐ Open the lead you just made (**Smoke Test Property**).
2. ☐ Find the **Activity** or **Notes** area.
3. ☐ Add a note: `Smoke test note on lead`. Save it.
4. ☐ The note should **appear right away**.
5. ☐ **Refresh the page**. The note should **still be there**.

✓ **Pass:** note shows and stays after refresh. ✗ **Fail:** it disappears, shows twice, or errors.

Test 3 — Add a note to an opportunity

1. ☐ Go to **CRM** → **Opportunities** and open **any** opportunity.
2. ☐ Find the **Activity** or **Notes** area.
3. ☐ Add a note: `Smoke test note on opportunity` . Save it.
4. ☐ It should appear right away, and still be there after a **refresh**.

✓ **Pass:** note shows and stays. ✗ **Fail:** error, disappears, or shows twice.

Test 4 — Turn a lead into an opportunity

1. ☐ Open the **Smoke Test Property** lead again.
2. ☐ Click the button that turns it into a deal — it says something like **Convert to Opportunity** or **Create Opportunity**.
3. ☐ It should make a **new opportunity** and open it (or show a success message).
4. ☐ On that new opportunity, check the **Activity/Notes** area.
5. ☐ The note from Test 2 (`Smoke test note on lead`) should **carry over** and show here too.

✓ **Pass:** opportunity is created AND the old lead note came along.

✗ **Fail:** convert button errors, makes nothing, or the note didn't carry over.

When you're done

- ☐ All four tests **passed** → reply to Russel: **"Smoke test passed ✓"**
- ☐ Any test **failed** → tell Russel **which test number**, and copy any error message you saw.

Cleanup (optional): you can delete the "Smoke Test Property" lead and the opportunity it made so they don't clutter the list.
Not sure? Just leave them.
